

Prescription for a Healthy Environment

Smart Disposal for Unwanted Medications

Is your medicine cabinet full of expired or unused medications?

Medicines flushed down toilets or poured in sink drains is a new and growing concern affecting the health of our rivers and lakes.

When pharmaceuticals are flushed or poured down a sink or drain they make their way into surface waters through the municipal wastewater treatment system.

Protecting the environment is everyone's responsibility. Do your part and follow these simple steps!

St. Clair County Health Department

Follow these medicine disposal steps to safeguard lives and the environment.

- Follow the specific disposal instructions on the drug label.
- If no instructions are given, never flush drugs down the toilet or the sink.
- Always throw drugs in the trash by putting them in a sealable bag.
- First mix them with a substance such as coffee grounds or kitty litter to make them undesirable.
- Scratch out patient information.
- Put mixture in a sealable or double bag to prevent leakage.
- Currently there is not a drug take-back program available in St. Clair County so talk to your pharmacist when in doubt.

**NEVER flush drugs
down the toilet or
sink drains!**
