COVID-19 Weekly Report
11/14/2020 to 11/20/2020

Dashboard Link: stclaircounty.org/offices/health/COVID19.aspx

Weekly Numbers:

- 778 New Cases
- 18 Hospitalized
- 8 Deaths
- 111 Average Number of New Cases/Day

- 16% of all hospital beds available
- 19% of all hospital beds currently used for COVID-19
- 894 Average number of tests per day
- 15.4% Percent of positive tests*

Overall Numbers:

- 3434 Total Cases
- 217 Total Hospitalized
- 75 Total Deaths
- 1414 Total Recovered

*The number of tests and positive tests include individuals that have been tested multiple times and includes out-of-county residents that are tested with-in St. Clair County.

This report is provisional and subject to change. As public health investigations of individual cases continue, there will be corrections to the status and details of referred cases that result in changes to this report. Weekly totals and averages only include changes for the reported week. Total cases to date for hospitalizations, deaths and recovered can be double counted (e.g. a person that has recovered and was hospitalized will count for both totals).

Total Cases: The total number of probable and confirmed cases following CDC guidelines investigated by St. Clair County Health Department.
St. Clair County COVID-19 Data:

7-Day Average of New Cases*

This report displays the running 7-day average number of new Covid-19 cases, both confirmed and probable cases. For each date a 7-day average of all cases is displayed along with a 7-day average of all cases excluding long term care facilities and the jail.

*This report is provisional and subject to change. As public health investigations of individual cases continue, there will be corrections to the status and details of referred cases that result in changes to this report. Information based on Referral Dates.
St. Clair County COVID-19 Data:

Average Number of Daily COVID-19 Tests per Week & Percent of Positive COVID-19 Tests*

This report displays the average number of COVID-19 tests per day for each week listed in the report. The average number of COVID-19 tests per day per week is represented by the blue bar for each week. This report displays the percent of cumulative COVID-19 tests that were positive each week and this metric is displayed as an orange line.

*This report is provisional and subject to change. As public health investigations of individual cases continue, there will be corrections to the status and details of referred cases that result in changes to this report. Information based on Referral Dates.
As of 8:30 AM 11.20.2020

This report is provisional and subject to change. As public health investigations of individual cases continue, there will be corrections to the status and details of referred cases that result in changes to this report.

This report displays the total number of probable and confirmed cases investigated by St. Clair County Health Department. Cases are reported by home address. For example, if an individual was exposed at work they would be counted by their home address, not their work address. In cases of long term care facilities, the facility address would be used for individuals that were residents for a period of time before developing symptoms or testing positive for the virus.
As of 8:30 AM
11.19.2020

This report displays the total number of COVID-19 cases referred to the St. Clair County Health Department within the given report range as listed above. Case numbers are displayed by home address. The number of cases in a zip code was adjusted ‘per ten thousand’ people scale so that zip codes could be easily compared. Data for this report was from the Michigan Disease Surveillance System (MDSS).
This report is provisional and subject to change. As public health investigations of individual cases continue, there will be corrections to the status and details of referred cases that result in changes to this report.
